Suggerimenti per la posa pulizia e manutenzione

MANTENIMENTO MATERIALE IN GIACENZA

Il prodotto Acquario Due, come tutte le bicotture, se tenuto in giacenza per periodi superiori a 10 giorni dovrà essere mantenuto in luogo coperto e asciutto.

1° FASE – POSA IN OPERA

Particolare cura ed attenzione dovrà essere posta in questa fase determinante per un buon risultato finale del progetto.

Evidenziamo che la differenza di tonalità fra una piastrella e l'altra non costituisce difetto, ma essendo caratteristica fondamentale della lavorazione artigianale della produzione “Acquario Due” esalata la profondità del colore stesso e della materia utilizzata per le nostre collezioni. Pertanto, durante la posa, suggeriamo di aprire le scatole ed effettuare un primo controllo per poi proseguire nella posa attingendo da 3-4 scatole contemporaneamente per poter meglio miscelare eventuali sfumature e cromie.

Nelle collezioni craquelé, consigliamo durante la fase di taglio, l'impiego di idoneo disco diamantato specifico per il prodotto da tagliare e l'uso di acqua pulita o acqua corrente, evitando l'acqua di riciclo.

Per la posa e la stuccatura, consigliamo collanti e sigillanti a grana fine non colorati. Finiture diverse dovranno essere testate in modo adeguato senza compromettere il cantiere.

Per il taglio delle nostre ceramiche consigliamo i dischi della ditta ADI – viale dell'economia – 36016 – Thiene (VI) – T.0445 360244

2° FASE – PRIMA PULIZIA DOPO LA POSA

Presupposto fondamentale dopo una posa corretta, eseguita “A REGOLA D'ARTE” per una prima pulizia, bisogna che questa avvenga quando la stuccatura è ancora allo stato plastico e quindi qualsiasi eccesso e residuo di stucco sia facilmente asportabile.

Allo scopo di seguire le istruzioni del produttore di stucco, ponendo particolare attenzione che per la pulizia e la livellatura del giunto venga utilizzata una spugna adeguatamente inumidita.

3° FASE – TRATTAMENTO ANTI-MACCHIA

Dopo aver verificato che la superficie ceramica da trattare sia asciutta e pulita, consigliamo di applicare mediante pennello in modo uniforme una mano di P21108 “craquelé protector” di FABER, sia per l'applicazione, che per la successiva rimozione dell'eccesso seguire le indicazioni del produttore del trattamento utilizzato.

4° FASE – PULIZIA E MANUTENZIONE ORDINARIA

Nelle pulizie quotidiane dei prodotti Acquario Due, sia pavimenti che rivestimenti in ceramica e/o pietra lavica sono vivamente sconsigliati tutti i prodotti a base acida sia concentrati che diluiti con acqua, è inoltre sconsigliato l'uso di strumenti abrasivi.

Sono da ritenersi pertanto sconsigliati, anche i prodotti anticalcare e le spugne abrasive ecc..

Pertanto sono consigliati l'uso di detergenti a neutri regolarmente in commercio applicati sempre con panni o spugne pulite, evitando che i prodotti con l'effetto craquelé vengano a contatto con acqua, detergenti, sostanze e materiali sporchi che possano rovinare il caratteristico effetto.

5° MANUTENZIONE

E' consigliato ripetere il trattamento antimacchia una volta ogni anno per tutte le superfici particolarmente sottoposte ai rischi di macchie come pavimenti, interni doccia, top e piani di appoggio. Prima di effettuare il trattamento, pulire accuratamente con FILACLEANER della Fila oppure WAX REMOVER della FABER.

Solo a superficie pulita ed asciutta procedere al trattamento con Craquelé Protector di Faber, seguendo sempre le indicazioni del produttore del trattamento.

6° INTERVENTI STRAORDINARI

Nell'ipotesi che erroneamente fosse stato utilizzato detergente a base acida e che questo porti alla presenza di iridescenza o aggressioni alla superficie vetrosa, FABER CHIMICA SRL, propone il recupero con POLISHING CREAM, con l'impiego di idonea attrezzatura roto-orbitale.

Al termine risciacquare con acqua pulita. Seguire sempre le indicazioni del produttore del trattamento.

NOTA BENE

Questi suggerimenti sono il frutto di una collaborazione con FABER CHIMICA S.r.l.

Via G. Ceresani 10, località Campo d'Olmo 60044 Fabriano (AN) - ITALY
